

NabungFi

Build what you're saving for

Why saving intentions slip

01 **Pooled money**

The purpose of each deposit gets blurred.

02 **Easy withdrawals**

A saving decision can be undone before the goal.

03 **Distant progress**

Small balance changes can feel far from the outcome.

Evidence behind the design

72%

More saved with two envelopes

241 vs 414 rupees
146 workers in rural India / 14 weeks

82%

Higher average savings balances

Group offered a commitment account
Philippines / after one year

Sources: Soman & Cheema (2011); J-PAL SEED evaluation.
External studies, not measured NabungFi outcomes.

Build what you're saving for

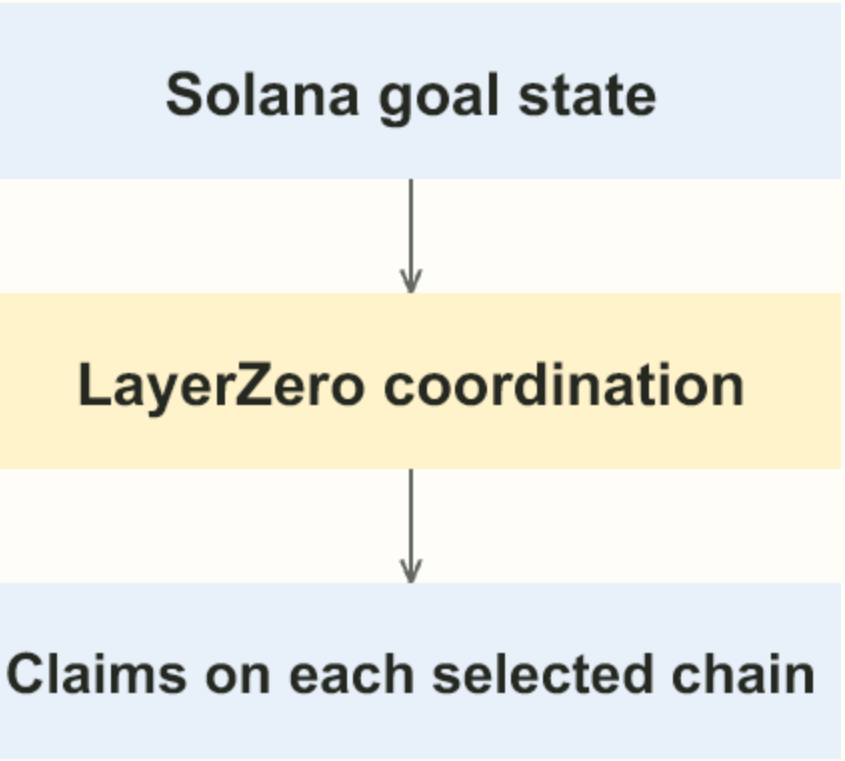

Why blockchain, why Solana

Rules attached to the funds

Goal targets and claims are enforced by contracts, with inspectable vaults.

Separate accounts on Solana

One shared program; each goal has its own state and USDC account.

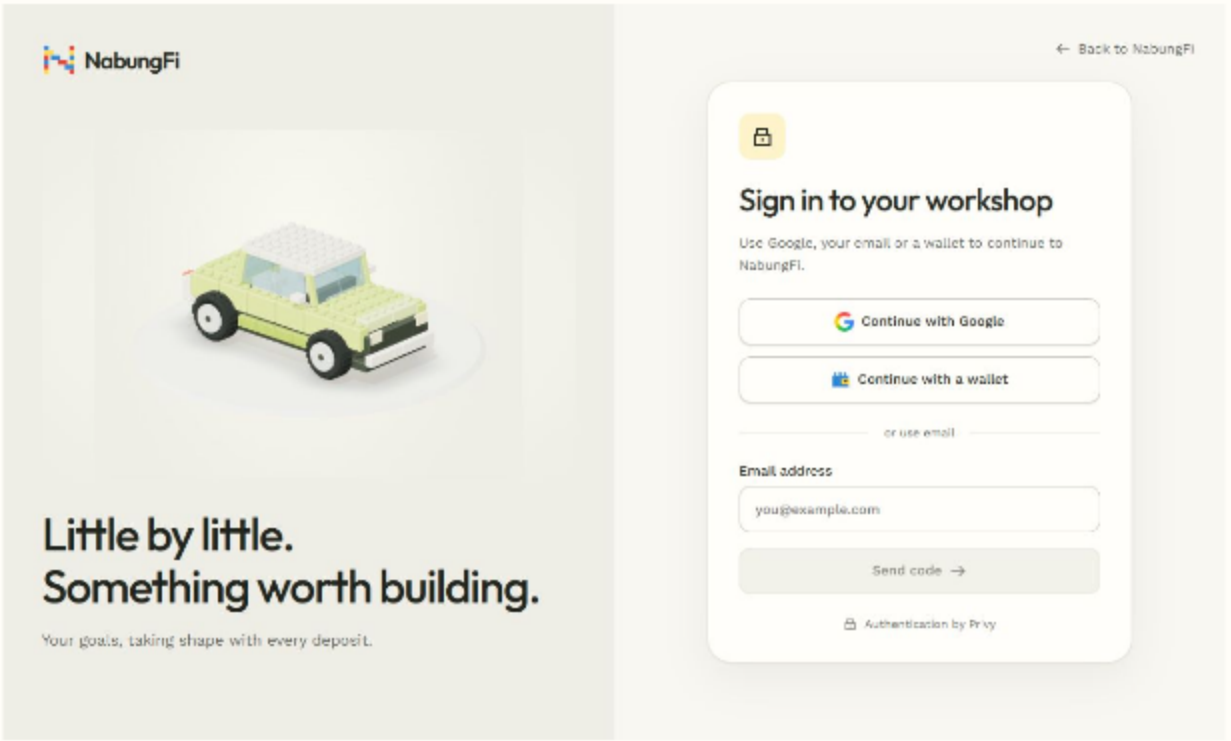

USDC stays in its original vault. Messages coordinate goal state.

The product flow

Sign in → Create → Save → Verify → Claim

Start with a familiar login

Google, email or wallet
Embedded wallets prepared for you
Install on mobile or desktop

One goal, across your networks

Example target: 10 USDC

Network	USDC	Share
Solana	4	40%
Base	2	20%
Arbitrum	2	20%
Ethereum	2	20%
Total	**10**	**100%**

100%

Target funded

Verify selected vaults
Then claim locally

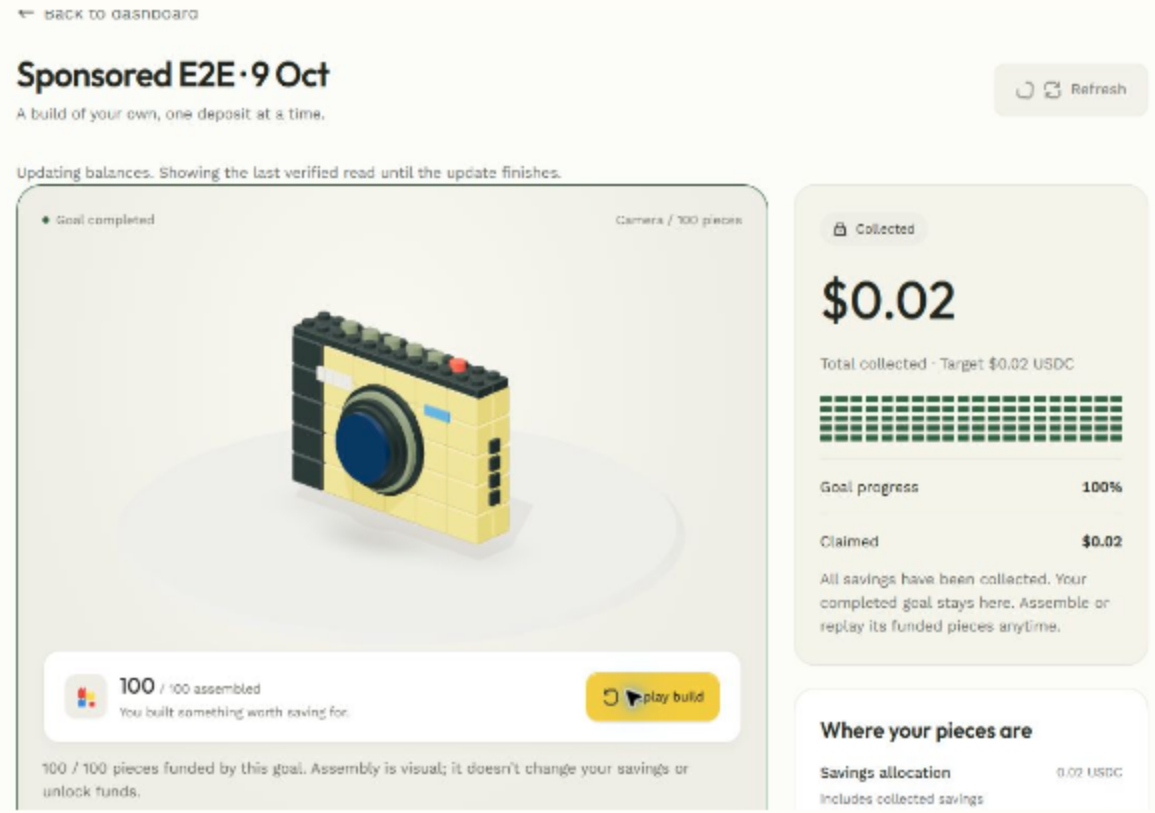

The final model piece follows verified achievement.
Illustrative split based on the recorded four-chain testnet goal.

Working on testnets

4 chains

51 owner transactions
12 claims
103 delivered messages

Recorded browser lifecycle
7 October 2026

Separate sponsored Base + Solana run: 9 October.
Cash-only testnets; mainnet, live yield and independent audit remain ahead.

Commercial direction

Optional paid planning

Test willingness to pay for features that support repeat saving.

Disclosed service fees

Evaluate only after user validation and contract review.

Proposed commercial direction. No current platform fee or revenue claimed.

Roadmap and first users

Testnet release → **User pilot** → **Security review** → **Mainnet readiness**

First users: USDC holders in developer communities

Measure first deposits, repeat saving and completed goals.
Review security and liquidity before a mainnet release.
